Junior BI Engineer

ABOUT

BI Engineer with 2 years of hands-on experience in designing, developing, and implementing business intelligence solutions. Proficient in data modeling, ETL processes, and dashboard creation, with a strong command of BI tools and technologies.

EXPERIENCE

- Contributed to data-driven strategies that drive business growth and innovation.
- Expertised in transforming complex data into meaningful narratives that guide organizational success.
- Collaborated with cross-functional teams to gathered requirements, optimized data models, and automated processes, enhancing data-driven strategies and fostering innovation.

TECH STACK

- SQL

EMPLOYMENT HISTORY

Business Intelligence Developer, Bunge

September 2022 — Present

As a Business Intelligence Developer, I play an important role in translating raw data into actionable insights for informed decision-making. My responsibilities include designing and managing databases, creating analytical solutions, developing visualizations, and optimizing data processes. Proficiency in scripting and version control enhances your efficiency in these tasks.

Business Intelligence Developer, Credit Suisse

October 2021 — September 2022

This role encompassed creating actionable insights from data to drive informed business decisions, designing, developing, and maintaining robust data solutions. My expertise in BASH scripting and GIT version control ensured efficient workflows and code management. My integral role in the BI development lifecycle contributed to enhancing business performance through meaningful data utilization.

DWH/ETL Developer, Credit Agricole Bank Polska S.A

August 2016 — September 2021

As a DWH/ETL Developer specializing in ETL using IBM InfoSphere DataStage, SQL, and PL/SQL languages, I was responsible for designing, developing, maintaining data integration processes within a Data Warehouse environment and transforming raw data into meaningful insights for decision-makers. I leveraged issue tracking through Jira and version control using SVN to ensure seamless collaboration and effective management of development projects.

EDUCATION

Master's degree, IT in business, Wroclaw University of Economics and Business

2017 — 2019

A Master's degree in IT with a specialization in Big Data for Business equipped me with advanced knowledge at the intersection of technology and business. This program delved into harnessing the power of large-scale data analytics to drive strategic decisions and enhance organizational efficiency.With a focus on data management, machine learning, and data-driven decision-making, this specialization prepared me to navigate the modern business landscape by leveraging data as a valuable asset for growth and competitive advantage.

Bachelor's degree, Informatics in business, Wroclaw University of Economics and Business

2013 — 2017

This program emphasized the design, development, and management of robust databases and mobile applications. Through a combination of programming, database management, and user interface design, I acquired the skills needed to bridge technological innovation with business objectives.
