

# DEVELOPMENT/TECHNOLOGY

## EDUCATION

- Faculdades Metropolitanas Unidas (FMU) – Information Systems (Bachelor's degree) (June/2018)

## LANGUAGES

- English - Advanced
- Portuguese - Fluent
- Spanish - Basic

## SUMMARY

- Perform requirements gathering and collect the most valuable informations around processes to convert them into functional requirements, as well evaluating the financial and operational feasibility;
- Coordinate and manage development teams and software houses, setting up deadlines and supporting technical requirements through the agile method;
- Develop, automate and manage software solutions using Python, C#, Automation Anywhere, UiPath,WDG Automation and others technologies;
- Technical administrator of development environments through Microsoft Azure Cloud, as well locally and cloud databases, code repositories and virtual machines;
- Support development solutions to integrate different Databases and Applications using ETL between SQL Server, MySQL, PostgreSQL and others datasources;
- Implementation of good practices programming such as ITIL and SCRUM into our Processes and Developments;

## WORK EXPERIENCE

### **Banco Votorantim Financeira (BV) – Expert Developer Python, jun/2021 - Present**

As member of a Product Credit Line Development Team, i'm responsible to gather information and map process to assure that customers needs will be converted to functional requirements, as well develop solutions of integration (API's), as specialist i need to lead our team and engage them into new discovers of how to moving forward our architecture day a day to keep our challenge transformation of traditional bank into a digital bank, as top projects we can consider:

1. Development of new credit line to acquire vehicles;
2. Create a new API to provide a credit line to Health and Care;
3. Build Microservices to transform a legacy system into a integrated system;

### **Claro Brasil S.A – Developer Automation Senior, nov/2018 - jun/2021**

Gather information and map process to assure that customers needs will be converted to functional requirements, as well develop solutions of integration (API's), and automation process using Python with its most common framework like Django and Flask, and its libs, like Pandas, also deploy and develop automations with UiPath, Automation Anywhere, WDG Automation and others .

Analyze operational processes and be able to provide improvements that will optimize the SLA, assuring quality and security, reducing manual interfering at critical processes, focusing at agile results and highly operational impact.

I would like to highlight the last 3 deployments and projects with most business value:

1. Interface to automate process of generate credentials into different corporate environments;
2. Automation of revoke credentials process, into Active Directories and Systems;
3. Integrate channels like URA, Service Desk Systems of employees to renew their passwords;

### **ALD Automotive/Société Générale – Project Analyst and Developer - aug/2016 until nov/2018**

Manage development projects, coordinating developers and software houses;

Technical migrate of source codes and applications to the Microsoft Azure Cloud, setting up end to end environment as IIS, SQL Server, Security Policies and etc's;

Supports the business and operational department with decisions to make the correct use of technologies for their challenges;

Support and develop integrating services, customer services and other applications using Python, C#,Automation Enterprise and others, i would to highlight the main 3 deployments and projects with most business value:

1. Integrate Banking Data Services with SQLServer Database and load transactions at SAP;
2. Collect data of systems, transform, move and load between SALESFORCE and others datasources, assuring an integrated process of ETL;
3. Integrate systems with public agency, cars manufacturers and provide strategic data to customers and managers around their vehicles;

### **ALD Automotive/Société Générale – IT Trainee - aug/2014 until aug/2016**

Accountable to analyze, get and distribute updates of systems and tools, as well as responsible to develop and provide a solution as “Self Software Library”, such Banking Plugins, Settings, Policies and Updates, reducing that SLA and simple tasks to the Service Desk Department.

Support the deployment of business systems as SAP, MasterSaf, CRM, through installing, updating and following up requests with International BackOffice;

## **FREELANCER EXPERIENCE**

### **SC Transportes – Logística e Transportes Fluviais – Senior Developer - 2019/2020**

Accountable of a fully ERP Tool, with focus at supply chain manage of fuel supply chain on ships at Santos Port, providing tools to manage fluvial fleet integrating users, key-users and partners, through all the process, ensuring cases rastreability, logs, generating templates and storing documents. Using the Django framework at Python, Flask, Pandas, NumPy and others libs.

## **SmartContent – Full Stack Senior Developer - 2018**

This was a startup project where I had to collect and gather ideas from a new product(concept) and transform it into a digital product, developing all interfaces front and backend, as well, integrating and monitoring services. The main objective was to build a platform of fleet management of vehicles and their drivers, allowing integration between drivers, business and cars data, providing to Fleet Managers tools to help them with decision making, optimizing costs, and time of maintenance, all the solution was built using Python, PHP, MySQL and tools to analyze data such as grafana.

## **TECHNOLOGIES**

- Internal Auditor ISO 9001:2015 (Bureau Veritas);
- Python, Dynamo DB, Django, Power Automate, Automate Enterprise, BluePrism, Automation AnyWhere,, Windows Server, Active Directory, Microsoft Cloud Azure, MySQL, Microsoft SQL Server, Network Automate (RPA), Visual Studio Online (TFS), Visual Studio, PyCharm, Grafana, ElasticSearch, Citrix, Internet Information Services (IIS);, VBS, .NET, VBA,UiPath, WDG Automation
