IoT Technical Architect at TT PSC
Kielce, Świętokrzyskie, Poland

Summary

Keep it simple, take responsibility and communicate with people - I think these aspects are the most important in my way of working.

Technical architecture, development and maintenance of IoT applications have been my main accountabilities for the past few years. The core of the technology stack is the PTC ThingWorx Platform combined with all the necessary tools and storage solutions needed to deliver a high quality product that can help Industry 4.0 in its daily work.

I love working as part of a team and having a say in how the solution could look to meet the customer's needs. I enjoy sharing my knowledge by running development workshops for new employees and for students at local universities.

My current role inside TT PSC organisation is IoT Technical Architect, which is described as:
"SME with a customer-facing. He has a very deep technical knowledge in some areas. Can work as a implementation's team leader for projects with defined scope. Can design the solution in his technical area of expertise and lead the team to process the implementation."

Experience

Transition Technologies PSC Sp. z o.o.
7 years 4 months

Senior IoT Specialist
April 2021 - Present (3 years 5 months)
